Special features

Plant pots and design & lighting objects

Temperature-resistant, weatherproof, UV-resistant and robust

High or low temperatures, extreme weather conditions and UV light do not affect our products. They are made of high-quality and robust materials such as polyethylene. These materials are not only long-lasting; they are environmentally friendly because they are recyclable.

Objects for indoors and outdoors.

Would you like the best possible flexibility in the setup of your products? No problem: We have designed our products to make sure that they are suitable both for indoor and for outdoor use. This means that you can let your individual design ideas run wild.

Coloured light accents, thanks to LED-RGB+CCT technology

Select from up to 16 million colour options. In addition to the colour tones, you can also vary the light temperature and the level of brightness. If you would only like warm white illumination, you can select our ESL solution.

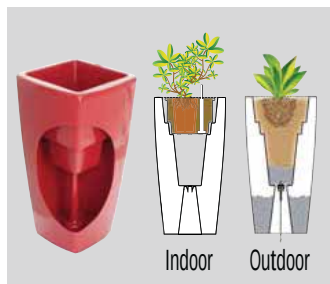

Control of several objects in one app

In addition to a practical remote control supplied with our illuminated LED variants, you also have the option of controlling illuminated Degardo® products — including those from different product families — using an optional WiFi controller and a free app on your end device.

XXL Large formats of up to 1.92 m in width and 1.50 m in height

If you would like to give large plants an elegant home or are just looking for impressive and unusual seating, we are sure to have the right thing for you in our range of XXL design objects. These are available in sizes up to 1.92 m wide and 1.50 m high.

Double-walled planter for thermal protection against frost

Each of our planters has a double wall to ensure that your plants live a long time: The hollow space between the outer wall and the container planting area ensures optimum frost protection for your plants. Water drains to the outside via a drain hole that can be drilled into the planter. Above you can see how simple planting can be.

Secure installation, thanks to anti-theft device

With an appropriate anti-theft device for our planters, you do not need to worry that they will be stolen. The securing elements are available as base plates in a bolted version. With their help, you will always be on the safe side.
